

What are Glitter Tattoos?

Well, Glitter Tattoos are a form of long-lasting temporary tattoos for kids, created by using a stencil template design, body glue and sparkly cosmetic grade coloured glitters, making a sparkly temporary tattoo for anybody who loves tattoos and glitter!

Temporary tattoos are applied to the skin using body safe adhesive, a body art stencil template and cosmetic grade glitter, this creates a beautiful shimmery temporary tattoo which can last up to 7 days on the skin. The tattoo does not, in any way, penetrate the skin, it purely sits on top of the skin.

How long does a Glitter tattoo last on the skin?

Glitter tattoos, if looked after, should remain sparkly and last up to 5 days. If your tattoo becomes wet, then simply dry with a soft cloth, do not rub the temporary tattoo as it may start to break up and come off the skin. Do not apply anything over the glitter tattoo as it will dull the glitter colour.

How do you remove Glitter Tattoos?

Should you wish to remove a glitter tattoo, we recommend using a rubbing alcohol, such as Isocol, as this will help break down the glue faster. If you don't have any rubbing alcohol, baby oil or eucalyptus oil on a cotton ball or face washer will do the trick. With any of the removers, gently remove the tattoo using circular motions, to avoid abrasions to the skin, it simply will not just wash off!
